IT Disaster Recovery Services
Business Continuity & Productivity

During the past year, companies have spent millions of dollars to restore data because they were unprepared for the worst case scenario.

At Impact Solutions, we provide proactive IT disaster recovery plans that eliminate risk and downtime. Your employees will remain focused on company priorities rather than a technology meltdown.

Backing Up Bad Data?

A restore is only as good as its backup. When is the last time you checked your backup tapes to ensure that you're not backing up corrupt data? If you've never tested the quality of your backup, simulated disaster recovery, or tested a failover, your data and your business is at risk.

Designing a Fail Safe System

We review every aspect of your network for vulnerability, trace every cable back to the panel, and document everything. Every component that needs to be redundant will be identified. After we've finished, your network will be optimized, redundant (if necessary) and your data will be safe and accessible.

The Proactive Solution

We don't wait for problems to occur, we constantly monitor your tape, disk backups and off-site data replication to ensure that your information is in tact and available in case of an outage or disaster.

We start with a complete review, and after analyzing our findings, we make recommendations that will help you make the best decisions and reach your goals. After our assessment, we will do a quarterly review to keep you up-to-date and well informed.

Additional Services: Managed IT Services, Cloud Services, Network Monitoring, Virtualization, Hosted Exchange Email, Spam Protection, Desktop Support, Server Support, Wiring & Cabling, Anti-Virus Protection, Free Assessments
